prosthodontist and Implantologist

SUPPORTED BY

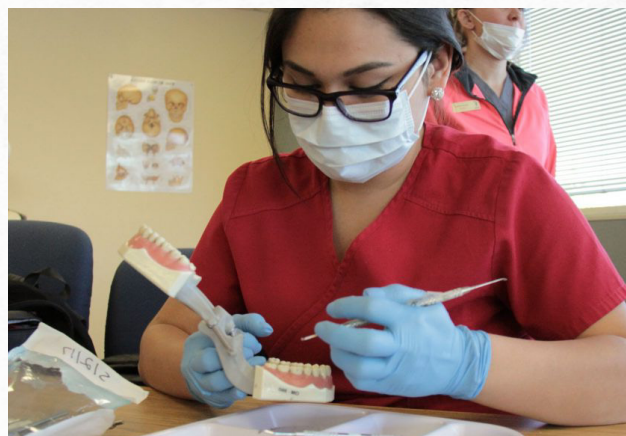

**“REHABILITATE ATROPHIC RIDGE
BY ZYGOMATIC IMPLANTS”**

About Global Dental Academy

GDA is a unique global institution that serves the dental profession by bridging the gap between formal education and clinical practice. GDA offers you practical information and insights on physiologic-based dentistry, which helps you improve the wellness and well-being of your patients. GDA makes physiology relevant to dentistry with scientific and logical information about innovative treatments and solutions. Our continuing dental education programs combine comprehensive diagnosis, modern techniques, and advanced technology. They enable you to become a holistic oral health provider, capable of treating the whole mouth, including teeth, bones, muscles, and joints.

Benefits Of Joining The Course

Elevate your professional prowess to new heights by delving into the realm of zygomatic dentistry. Expand your knowledge and expertise in utilizing zygomatic implants, a cutting-edge solution for patients with significant maxillary resorption, providing them with the necessary functionality. Zygomatic implants serve as an innovative alternative to traditional implants and effectively eliminate the requirement for bone grafting procedures. This groundbreaking technique also referred to as the 'Zygoma technique,' was pioneered by Prof. Branemark and Nobel Biocare of Sweden.

Learning Objectives :

- Understand the principles and indications for zygomatic implants in dental rehabilitation.
- Gain knowledge of the surgical techniques and protocols involved in placing zygomatic implants.
- Learn about the prosthetic considerations and techniques for restoring zygomatic implants.
- Familiarize oneself with the management of complications and potential challenges associated with zygomatic implants.

Learning Outcomes :

- Participants will be able to assess and determine suitable cases for zygomatic implant placement.
- Participants will acquire the skills necessary to perform zygomatic implant surgeries effectively and safely.
- Participants will be capable of developing comprehensive treatment plans and executing prosthetic restorations for patients with zygomatic implants.
- Participants will be equipped to anticipate and manage complications related to zygomatic implants.

Two days lectures

**Hands-on training
on dummy maxilla**

**Impressions and
digital scanning**
